## THE MANNER OF OBTAINING AND ACCOUNTING FOR MEDICAL AND HOSPITAL SUPPLIES FOR THE ARMY.

## STANDARD SUPPLY TABLE.

CIRCULAR, No. 12.

SURGEON GENERAL'S OFFICE, *October* 20, 1862.

1. The standard of medical and hospital supplies for the army is the following supply table. It is not the design of the Department to confine medical officers absolutely to that table, either in variety or quantity, but only to establish a standard for their guidance in making requisitions for supplies, leaving individual preferences to be indulged at the discretion of the Medical Director or the Surgeon General. Neither is it supposed that the quantities of the table will always meet the necessities of unusual emergencies, as during epidemics, or in unhealthy seasons and localities; and medical officers who allow their supplies to be exhausted through any such contingencies, without timely notice of their approaching necessities, will be held to a strict accountability.

2. Medical Purveyors are charged, under the direction of the Surgeon General, with the selection and purchase of all medical and hospital supplies for the Army. In all cases of emergency they may provide such additional accommodations for the sick and wounded of the Army, and may transport such medical and hospital supplies as circumstances may render necessary. In all cases of emergency they shall promptly issue supplies on special requisitions made directly upon them; and such special requisitions shall consist simply of a list of the articles and quantities required, and be dated and signed by the medical officer who makes the requisition.

3. Except in the "cases of emergency," referred to in the preceding paragraph, Medical Purveyors and Medical Storekeepers will issue medical and hospital supplies only on the order of the Surgeon General, the Assistant Surgeon General, the Medical Inspector General, a Medical Inspector, or a Medical Director.

4. Medical Storekeepers are charged, under the direction of the Surgeon General and Medical Purveyors, with the storing and safe keeping of medical and hospital supplies, and with the duties of receiving, issuing, and accounting for the same, according to regulations. Medical and hospital supplies transferred to Medical Storekeepers by Medical Purveyors will be receipted for as invoiced without breaking packages, provided the number of packages correspond with the invoice, that they are in good shipping condition, and that there be no reason to suppose the contents broken or defective.

5. Medical Purveyors and Medical Storekeepers at depots for issue, and at field depots, and the senior medical officers of hospitals, regiments, posts, or detached commands, will make their requisitions for medical and hospital supplies upon the Medical Director under whom they may be serving. The Medical Director will approve or modify the requisitions at his discretion; and, in ordinary cases, will transmit them to the nearest Purveyor or Medical Storekeeper, with his order for the supplies. If, however, the amount required be large, and the situation and nature of the service permit, the Medical Director will transmit the requisitions, with his recommendations indorsed thereon, to the Surgeon General.

6. Requisitions for medical and hospital supplies are to be made in duplicate. In preparing them, medical officers will conform to the Standard Supply Table, both in the articles and quantities asked for, avoiding fractions in quantities. When increased quantities or additional articles are required, the reasons therefor must be assigned, or they will not be supplied.

7. Requisitions for outfits of medical and hospital supplies will be made for three months, and in the form of a letter, stating the number of men or beds to be supplied, and whether for general hospitals, permanent posts, or field service. If for permanent posts, the amount of hospital accommodation must be stated, so that, if less than one hundred beds, the allowance of bedding, hospital clothing, furniture and appliances, may be correspondingly reduced.

8. Requisitions to replenish medical and hospital supplies will always be made in detail, according to Form 1, Regulations for the Medical Department, and for those articles only that are really deficient in quantity. If the supplies are to be obtained from the principal purveying depots, these requisitions will be made quarterly; if from department or field depots, they will be made at such times and for such periods as the Medical Director may prescribe.

9. When it is necessary to obtain medical and hospital supplies, and recourse cannot be had to a Medical Director, Purveyor, or Storekeeper, they may be purchased by a Quartermaster, on special requisition made according to Form 2 and Account Form 3, Medical Department.—(See Army Regulations, paragraph 1233.) A triplicate of all such special requisitions, giving the name and station of the officer upon whom it is to be made, is to be transmitted, through the Medical Director, to the Surgeon General, for his information, and as a guide in auditing the account when presented.

10. Those articles of the Standard Supply Table which are printed in italics will be furnished only on special requisitions approved by the Surgeon General.

11. Articles of furniture and appliances in Class No. 2 will be issued on "requisitions for outfits," but not on "requisitions to replenish supplies," unless the medical officer certifies that they cannot be purchased with the hospital fund.

12. The "Hospital Fund" is a credit simply with the government, to be applied from time to time, according to the necessities of the sick in hospital, to authorized expenditures for their subsistence or comfort, and for articles not otherwise furnished. Medicines, regular supplies of the Quartermaster's Department, &c., &c., are not to be obtained from this fund. Money will not be transferred by a commissary to a medical officer, or to any officer or agent, as "Hospital Fund," unless the War Department expressly authorizes such transfer.—(Paragraph 32, Regulations for the Subsistence Department.)

13. Hospital clothing belongs to the United States, and will only be worn by patients during their stay in the hospital. Each article will be marked as hospital property, and with the number of the bed for which it is appropriated.

14. Medical Purveyors and Medical Storekeepers will make to the Surgeon General, at the end of each fiscal quarter, returns in duplicate (Form 4) of medical and hospital supplies received, issued, and remaining on hand, stating to whom, or from whom, and where and when issued or received; other medical officers in charge of medical hospital supplies make similar returns of them annually, on the 31st of December; and all officers, when relieved from the duty to which their returns relate. The returns will show the condition of the stores, and particularly of the instruments, bedding, and furniture. Medical Purveyors and Medical Storekeepers will furnish abstracts of receipts and issues, with their returns, (Form 5,) giving the name of the person from whom received and to whom issued.

15. An officer transferring medical and hospital supplies will furnish a certified invoice to the officer who is to receive them, and transmit a duplicate of it to the Surgeon General. The receiving officer will furnish a receipt to the officer making the issue, with a report of the quality and condition of the articles, and transmit a duplicate of the receipt and report to the Surgeon General. A medical officer who turns over medical supplies to a quartermaster for storage or transportation will forward to the Surgeon General, with the invoice, the quartermaster's receipt for the packages.

16. Medical officers will take up and account for all medical and hospital supplies of the army that come into their possession, and report, when they know it, to whose account they are to be credited.

17. The transfer of surgical instruments issued to Medical Officers for their personal use is positively forbidden. Each Medical Officer will retain those instruments in his immediate possession so long as he remains in the Army, and will be held responsible for their complete and serviceable condition, and for their easy accessibility at all times. If the instruments be lost, destroyed, or damaged, they must be replaced or repaired as soon as possible by requisition upon the nearest Medical Purveyor, setting forth fully the causes of such loss or damage. If the loss or damage be from the unavoidable casualties of the service, the expense of replacing or repairing the instruments will be paid by the Medical Department; if from any other causes, such expenses must be paid by the Medical Officer.

18. When a Medical Officer leaves the Army, he will deliver his instruments to the nearest Medical Purveyor, taking receipts therefor in detail; and if transportation be required, he will take receipts for the package containing the instruments from an Officer of the Quartermaster's Department.

19. Staff Surgeons, Staff Assistant Surgeons, and Medical Officers in charge of General Hospitals, will be furnished with *additional instruments*, on special requisition, provided the reasons for requiring them be given and prove satisfactory to the Surgeon General.

20. The Surgeon General, Assistant Surgeon General, Medical Inspector General, and Medical Inspectors, are allowed the same instruments as Staff Surgeons.

21. These instruments will be accounted for to the Surgeon General on the 31st of December annually, in a special return, in which the true condition of each must be stated; and if any be lost or damaged, a report of the facts and circumstances attending such loss or damage must be given.

22. Medical Purveyors are directed to have all surgical instruments made in the best manner, of the best materials, and according to patterns approved by the Surgeon General. Each instrument is to be inspected, and each chain-saw tested on fresh bone, by them, or under their supervision, before being paid for or issued.

23. Medical Officers will report to the Surgeon General all defects observed in the material or construction of their surgical instruments, giving the name of the maker, and of the officer by whom they were issued.

24. When articles are required in large quantities for use in hospitals and at permanent posts, and not for reissue or for field service, Medical Purveyors will disregard the size of packages designated in the Standard Supply Table, and will issue in such packages as they may deem most advantageous for the public service.

25. Carbolic acid, (Bower's,) sulphate of iron, nitrate of lead, chlorinated lime, or charcoal, will be furnished as antiseptics, or disinfectants, when required.

26. Applications for microscopes by medical officers in charge of general hospitals will be favorably considered, provided the evidence be satisfactory that the officer will use the instrument for the benefit of science, and will report the results of his observations to the Surgeon General.

27. The dissecting case, obstetrical case, pocket case for hospitals, teeth extracting case, hospital knapsack, and medicine panniers, will be issued, receipted and returned for as *sets*, without stating their contents in detail.

28. In all official lists of medical supplies the classification, order, and nomenclature of the Standard Supply Table will be strictly followed. The whole Table need not be transcribed, but the names of those articles only which are accounted for or required.

Six Iron Teaspoons, tinned.
One Tin Tray.

WILLIAM A. HAMMOND,
*Surgeon General U. S. Army.*

---

NOTE.

A few copies of Circular No. 12, of September 20, 1862, were sent to medical directors and purveyors, for the purpose of testing the practical working of a new supply table. A brief trial having shown the necessity for a revision of that table, the circular was withheld from general distribution, and the present revised copy substituted therefor. Medical officers having copies of the first edition in their possession will return them to this office.

Medical officers will correct the following errors in the printed form for "Report of Sick and Wounded:"

For "*Prostrate*" substitute *Prostate.*

Under the heading "Flesh Wounds," and after "*of upper extremities,*" insert *of lower extremities.*
